

Eco-communication

As a semiconductor manufacturer, the NEC Electronics Group promotes eco-communication in order to build good relationships with all of our stakeholders.

Communication Activities

We make environmental information available to the public in the effort to promote global information transmission.

We publish an environmental management report, disclose environmental information on our website, and participate in symposiums and exhibitions to facilitate global disclosure of information on our environmental efforts.

Website information disclosure

We provide environmental information services on our website, as one of the important tools we use for eco-communication. Our environmental policies, the content of our environmental efforts, and environmental reports are available to the public at the site. In view of the many inquiries we receive from customers concerning our lead-free activities, we have added searchable pages with information and data on recommended soldering conditions, solder joint reliability, and other related topics.

NEC Electronics Group companies also release environmental information on their own websites.

Product-related environmental information provision to customers

In response to customer requests for information on the environmental impact of products and substances they contain, we developed and operate a database of environmental product information and organized a team that works full-time replying to customers' inquiries. Chemical substances contained in products can be checked immediately by accessing the database product composition tables. In this way, we can rapidly provide customers with accurate environmental information on products.

In addition to providing environmental product information, we have also formed a team whose sole job is to answer questions about RoHS compliance and environmental management systems implemented by the NEC Electronics Group. This enables us to quickly respond to requests for environmental information of a general nature.

Inquiry response flow

Presentation at ISESH

At the International Semiconductor Environment, Safety, and Health Conference that was held in June 2005 in Portland, Oregon, NEC Electronics America made a presentation at the PFC session chaired by NEC Electronics.

The presentation was a chance to share information with semiconductor industry representatives from around the world about our PFC-alternative technology activities, including their contribution to environmental protection and how these measures are effective from an economical standpoint as well.

Factory tour for preschoolers

NEC Fukui has built a biotope in its factory grounds. In October 2005, children from a nursery school nearby were invited to participate in a nature outing and learn about the creatures that inhabit the biotope. The children also enjoyed the chance to scoop medaka (Japanese rice fish) out of the pond, hunt for dragonfly larvae, and collect insects.

TALK about ECO — Our environmental efforts

Kyoko Hasegawa
NEC Fukui

The biotope is a door to the wonders of nature.

Since we completed the biotope, which is built next to the walking path in the company grounds, we have gotten involved in natural environment formation in the community. The biotope gives us an opportunity to observe aquatic creatures and plants that we previously knew nothing about and to get a close-up look at some of the wonders of nature. We want to continue to use the biotope as a tool for communication with children and adults in the community, that gives us all an opportunity to appreciate the amazing power of nature.
