

# Eco-communication

As a semiconductor manufacturer, the NEC Electronics Group promotes eco-communication in order to build good relationships with all of our stakeholders.

## Communication Activities

**We make environmental information available to the public in the effort to promote global information transmission.**

We publish an environmental management report, disclose environmental information on our website, and participate in symposiums and exhibitions to facilitate global disclosure of information on our environmental efforts.

### Website information disclosure

We provide environmental information services on our website, as one of the important tools we use for eco-communication. Our environmental policies, the content of our environmental efforts, and environmental reports are available to the public at the site. In view of the many inquiries we receive from customers concerning the state of our compliance with RoHS regulations, we have added searchable pages with information and data on recommended soldering conditions, solder joint reliability, and other related topics.

NEC Electronics Group companies also release environmental information on their own websites.

### Presentation at ISESH (The International Semiconductor Environment, Safety, and Health)

In June 2006, ISESH was held in the Republic of Malta. NEC Electronics, as a participant of JEITA (Japan Electronics and Information Technology Industries Association), attended and gave a presentation on the company's environmental activities and strategies and energy-saving activities carried out by NEC Kansai.

### External presentation activities

In January 2007, NEC Kyushu was invited by Kyushu Electric Power Co., Ltd. to give a presentation entitled "NEC Kyushu's Environmental Management." The presentation by NEC Kyushu introduced the company's efforts to prevent global warming, conserve water, and manage chemical substances.

Also, NEC Semicon Package Solutions gave a presentation on examples of energy-saving improvements made by the company at a presentation meeting on efficient use of electric power held in Kyushu in February 2007.

### Plant tour

In November 2006, NEC Kansai received a group of fifth-grade students from an elementary school near the company who came to tour the plant. Company employees talked to the children about environmental problems and efforts NEC Kansai was making to combat the problems. NEC Kansai will continue contributing to environmental education in the community through activities such as this.

In August 2006, NEC Yamagata opened its plant for a tour in cooperation with a course for citizens sponsored by the Tsuruoka City Central Community Center, "On-site Look at Earth-friendly Activities by Companies." Twenty junior high students and community residents viewed environmental activities in progress and toured related facilities, which gave them a deeper understanding of efforts undertaken by NEC Yamagata to protect the environment.
